## Customer Reviews

I am a masters student pursuing my Master of Science in Emergency Management. This was the

required textbook for Hazard Mitigation. I cannot recommend this text enough. Any student or even practitioner in the field of EM needs this book on their shelves. It delves into natural, technological, and man-made hazards not only in the U.S., but also in countries around the world.

For academics, this is a terrible textbook. The textbook consists of examples, but the support documents in the content are missing and much of it is based on old theories that are not relevant or based on current local, State, and Federal practices. The textbook lack sufficient content to write a university level course and requires extensive research to augment the lacking content

Excellent book and a great resource on hazard mitigation! The book covers both natural and man-made hazards and also mitigation activities in other countries besides the U.S., which I like the most.
