This is likely the most complete and detailed reference available on the subject of Cannabis production, covering everything from the basics of gardening to the construction of large growing facilities, plant diseases and problems, breeding and genetics, pest control -- you name it, it's covered here, and in amazing detail, profusely illustrated with beautiful photos and informative graphics. Interestingly, the foreword is written by Vicente Fox, former President of Mexico, whose country and people have suffered the worst of the so-called War on Drugs, and whose insights are especially poignant. Beyond that, there is a brief discussion of the history of medical cannabis, and not a great deal on the subject of legalization. That's for the better, as the situation regarding both medical and recreational cannabis is changing so rapidly. It should be noted that while the main focus of the book is on medical Cannabis, the information is equally valid and useful for those who live where either personal or professional Cannabis production is legal. Beginning with a general overview of the growing process, there are detailed chapters on everything from seed selection and germination, indoor and outdoor gardening, hydroponics, lighting, life cycle and flowering, harvesting, and post-harvest processing and preservation, and troubleshooting the various problems that come up. The information is not just there, but it is well organized and presented, so you can look up and find what you need.
