Customer Reviews

I can appreciate the complexity of this subject from a biological, scientific point of view but I am not convinced in the whole primordial soup theory of our creation. The author supplies all sorts of laboratory data and attempts to connect the dots between the first glimmers of matter bumping into other bits of matter until eventually, something crawled out of the puddle. Fast-forward a few quintillion years and now that bit of matter is chatting on its cell phone ordering a pizza. Ok maybe that's not exactly what the author says in this book but that's what I got out of it. I can't help but

believe somewhere there are other intelligent beings who have the answers we seek. Science has its place when we can see the results of our experiments but what about the possibility of God? How can we be so arrogant to believe a divine being does not exist and had no hand in the creation of life as we know it? This book is a quick read and might just answer some questions for other people who prefer to believe life is something that happened by chance but like I said, I don't buy into it myself.

This was a fantastic book! It explains basics for understanding the origin of cosmos, life, Homo sapiens and early development of the human society. It's very easy to understand compared to other books on this subject that I've tried to read and comprehend! I think a lot of people are turned away from this type of reading because it's too hard to understand by the ways of the authors writing and would be more appealing to many if they weren't quite so complex. This author is changing that and I look forward to reading more of his works!

My wife brought home this book yesterday and it immediately caught my attention, partially as I had recently finished a DVD course by Alex Filippenko titled Understanding the Universe: An Introduction to Astronomy. This was a series of 96 half hour lectures on the cosmos, which Paul Roman managed to succinctly compress into a very understandable half hour read. I was particularly impressed with Paul's summation on the origins of life in the second chapter - this encourages me to read more on the subject. The chapters on evolution and Man simply whetted my appetite for more and I await his sequel. Thanks for the "as alluded to" concise description of humanities miraculous being.

The author thinks that the subjects dealing with the origin of the cosmos, life and Homo sapiens would be more appealing to many if they weren't quite so complex. That's why he tried to comprehensibly elucidate them on less than 100 pages. Here are two comments from his editors and beta readers:- I have to admit, I was somewhat skeptical as to the need for a book like this altogether, and about you, being an Architect, writing it. However, I am really impressed by the overall concept of having an almost comprehensive "story" of humanity coming into being from "pre-big-bang"- "non-times" to almost the present.- You encapsulate your subjects well - very briefly - and that's not easy.
