Customer Reviews

Living in Southern Nevada and within a short driving distance of Las Vegas, it would be impossible not to share some interest in gaming or indulge in this satisfying and â€œsinfulâ€• pleasure on occasion. However, itâ€™s one thing to take in the sumptuous surroundings and opulence of a grand casino, and quite another to be taken in by the casino itself. Professor Joseph Maderick does something that few writers on this subject ever do, he approaches gaming not from the point of view of winning, but from the point of view of minimizing losses. Being a UNLV (University of Nevada, Las Vegas) professor of educational technology, Dr. Maderick has a firm grounding in the math and statistics of gaming, a multi-billion dollar industry built on â€œthe odds,â€• where the odds are always stacked in favor of the casinos. Anyone who does the math knows this is true but knowledge of the odds is also of great benefit to the player, allowing them to lose only a little instead of a lot. Cynics might wonder then why play at all if you know youâ€™re going to lose overall in the long

run? Keep in mind that playing at a major casino means not only the remote chance of a winning streak, but the very definite reality of free rooms, free food, free drinks, free shows and much more! In this respect, one who learns how to lose only a minimum amount of money by playing intelligent craps or smart roulette can actually walk away with far more value in freebies and fun than any money they invest. Besides, it's way more fun to play when you know you're doing it in a clever and informed manner, which is precisely the type of knowledge one gains from reading this book or any others in the excellent down-to-basics gaming series by Professor Joseph Maderick.
